“Novel Compounds, Drugs, Therapeutic Approaches, and Related Patents for Tropical Infectious Diseases”

Guest Editor: Attapon Cheepsattayakorn, MD, FRCP, FRCP(Edin), FRCP(Glasg), FACP, FCCP, FRCP(Thai), FRCFP(Thai), FRCR(Thai), Diploma of The Thai Board of Preventive Medicine (Public Health Science)

Aims and Scope

Tropical diseases, particularly some neglected diseases are a large and diverse group of diseases that disproportionately affect health and livelihood of the poor in the developing countries and characteristically lack attention for research and development. In recent decades, although there has been significant progress toward the elimination and eradication of some tropical diseases, there is still an unmet need to discover, develop, and deliver tools and strategies to diagnose, treat and interrupt transmission of some diseases, such as dengue disease, filariasis, malaria, etc. This special issue is aimed to summarized the interesting research articles involved these diseases contributed by several renowned-prestigious-experienced researchers around the world for publication in the prestigious journal “Recent Patents on Anti-Infective Drug Discovery”. This prestigious issue is expected to be highly valuable for the readers around the world, particularly readers in the developing world.
Approximate Schedule

Tentative Submission Date: February 2015

Tentative Publication Date: April 2015
