

CALL FOR PAPER

Protein Kinase Inhibitor

Protein kinases are enzymes catalyzing the incorporation of phosphate to Ser, Thr or Tyr residues of a protein. The inhibitors of different types of these enzymes have an importance in the drug design since the protein phosphorylation is necessary in some diseases. The special issue aims to give a light on these different inhibitors with respect to establishment, investigation of their biological effect, toxicity and availability for use as a drug. The publication of a research work in cell culture or animals is welcome for this issue.

Announcement start: 1/2/2015

Reviewing time: Six months

Publication date 1/9/2015.
