Aims & Scope:
The renaissance of plants derivatives is due to several reasons such as the higher side effects of the conventional medicine. According to FDA definition, botanical products are finished, labeled products that contain vegetable matter as ingredients. A botanical product can be conventional foods, dietary supplements, drugs, cosmetics, or medical devices depending on the attributes of the finished product. On these bases, this thematic issue wants to describe the recent advances in natural product development. In particular, the focus was on their activity in different fields and the strategies applied to obtained efficient and stable formulations, an important goal for pharmaceutical, cosmetic, nutraceutical, and food industries.

Keywords:
Botanicals, drugs, natural product, nutraceuticals.

Schedule:
January 2019
