Aims & Scope:
Applied neuroscience includes contributions and insights from neuro-biochemistry, molecular neurobiology, neuroimmunology, neuropharmacology and among others.
This topic will embrace a complex multi-dimensional interface between basic neuroscience innovative study designs, advanced medical information technologies and their implementation in clinical disciplines, such as neurology, psychiatry, neurosurgery. It will address as well the interplay of complex neurobiological factors and psychosomatic disorders.
There will be invited outstanding contributions from leaders in the field from the Universities of Lisbon, Portugal, Bergen, Norway, among others.

Keywords: neurobiology, neuropharmacology, neuro-imaging, translation

Subtopics:
The subtopics to be covered within this issue are listed below:

- Therapeutic and diagnostic applications of evidence from basic neuroscience
- Implementation and methodological issues of translation from neuroscience animal models to humans in new drug design clinico-biological trials
- Immunochemical and cellular mechanisms as drug targets for mental disorders
- Molecular-biological mechanisms of neuropsychiatric disorders as diagnostic biomarkers
- Novel approaches to translating and integrating the data from third-generation neuroimaging techniques and neurochemistry

Schedule:
- Manuscript submission deadline: August 31<sup>st</sup> 2018
- Peer Review Due: September 15<sup>th</sup> 2018
- Revision Due: September 30<sup>th</sup> 2018
- Announcement of acceptance by the Guest Editor: October 10<sup>th</sup> 2018
- Final manuscripts due: October 31<sup>st</sup> 2018

Contacts:

Guest Editor: Professor Dr Drozdspoy Stoyanov, MD, PhD, PgCert, IDFAPA
