

Tentative Outline
Special Issue for CURRENT VASCULAR PHARMACOLOGY
Guest Editor(s): Shams Tabrez

Novel therapeutic approaches towards the treatment of Vascular diseases

Aims & Scope:

Cardiovascular disease (CVD) remains a leading cause of death worldwide. Even-though, there are some progress made in this field of research but this disease is a still a leading cause of death all across the world. Several risk factors factors viz. lifestyle changes (physical inactivity, unhealthy diets and harmful use of alcohol), along with type 2 diabetes, dyslipidemia etc makes the general human population, vulnerable to this disorder. As per the latest WHO report, CVD contributes approximately to 31% of all deaths in the global population and nearly 50% of non-communicable diseases associated deaths. In view of high number of death associated with this devastating disorder till now, it demands an exploration of novel methods for the early diagnosis and treatment option so that it could be effectively thwarted. In the current thematic issue, I believe that we will receive some interesting scientific discoveries including research and review articles that will shed light in the recent developments in this field of research.

TENTATIVE TABLE OF CONTENTS/CONTRIBUTORS

- Role of Vascular endothelial growth (VEGF) factor signaling in tumor vascularization
Shahab Uddin
- Phytochemical therapies in vascular functioning: A molecular Approach
Kazim Sahin
- Galectins-potential target for cardiovascular therapeutics
Ghulam Md. Ashraf
- Thrombotic management of Antiphospholipid syndrome: Current drugs enough?
Siew Hua Gan
- Rho-kinase, a novel therapeutic target in the treatment of cardiovascular diseases
Wajihullah Khan
- Advances in therapeutic targeting towards diabetes associated cardiovascular disease
Shams Tabrez
- A glycation angle to look into the Diabetic Vasculopathy: Cause and Cure
Saheem Ahmad
- Gut microbiota in vascular disease: therapeutic targets
Shubha Priyamvada
