Tentative Outline

Special Thematic Issue for Current Vascular Pharmacology

Title of thematic issue: Antithrombotic therapy in patients with Peripheral Artery Disease

Guest Editor: Marco De Carlo, MD, PhD, FESC

Aims & Scope:

This Issue aims at providing a thorough perspective on the current evidence and practice regarding antithrombotic therapies in patients with peripheral artery disease (PAD). Following an in-depth description of the specificity of pathophysiology of thrombosis in peripheral arteries, the Issue will cover the available drugs for antithrombotic therapy in both stable PAD and following surgical and endovascular revascularization. A perspective on the various grading systems for bleeding risk assessment in patients receiving antithrombotic therapies will close the Issue.

Keywords:

Subtopics:

The subtopics to be covered within this issue are listed below:

1. Pathophysiology of thrombosis in PAD
   Prof. Bianca Rocca, Catholic University, Milan, Italy

2. Antithrombotic therapy in stable PAD
   Prof. Victor Aboyans, University of Limoges, Limoges, France

3. Antithrombotic therapy for peripheral revascularization
   Dr. Marco De Carlo, Pisa University Hospital, Pisa, Italy

4. The bleeding risk in antithrombotic therapies
   Prof. Lucia Mazzolai, University of Lausanne, Lausanne, Switzerland

Schedule:

- Manuscript submission deadline: June 1\textsuperscript{st}, 2019
- Peer Review Due: July 20\textsuperscript{th}, 2019
- Revision Due: August 15\textsuperscript{th}, 2019
- Announcement of acceptance by the Guest Editors: September 20\textsuperscript{th}, 2019
- Final manuscripts due: December 31, 2019
