Tentative Outline

Special Issue for Endocrine, Metabolic & Immune Disorders - Drug Targets

Guest Editor(s): Omar Cauli, University of Valencia, Valencia, Spain

Metabolic and Hormonal Alterations in neuro-psychiatric disorders

Aims & Scope:

Neuropsychiatric disorders are common debilitating conditions associated with poor quality of life and premature mortality. Several metabolic alterations are found in these disorders and many neuropsychiatric disorders often co-occur with metabolic disturbances. The knowledge of these alterations may offer the possibility to evaluate new pharmacological and non-pharmacological interventions to modulate those alterations leading to an improvement of patients' life and their environment. The thematic issue wishes to shed new lights in this exciting and insightful field of research.

Key words: (at least 5 keywords as follows)

Endocrine, metabolism, biomarkers, comorbidity

Subtopics: (either 3 to 5 or 6-10 topics or paper titles)

Neuropsychiatric alterations in diabetes and disorder of glucose metabolism
Metabolic alterations in depression
Metabolism alterations on schizophrenia
Homeostasis in neuro-psychiatric disorders

Schedule:

Manuscript submission deadline: June 30, 2017
Peer Review Due: July 30, 2017
Revision Due: September 30, 2017
Notification of acceptance by the Guest Editor: October 30, 2017
