Issue Title: Biogenic nanoparticles for biomedical application

Issue Description: Biogenic nanoparticles have a great attention today for their inevitable biomedical applications. Synthesis of nanoparticles by physical and chemical methods gained some defects due to expensive procedures, series of chemical reactions and utilization of high energy. Biosynthesis plays a important role to overcome above mentioned obstacles. This issue may attract the audience who working on nanoparticle synthesis using biological entity such as bacteria, fungi, algae, plant and etc. This issue may create a great interest and impact to the readers.

Issue Keywords: Biosynthesis; Nanoparticles; capping agents; antimicrobial; bioactivity;

Tentative Date: 17th March, 2015.
